

General Instructions

- Take lots of pictures as you take your carburetor apart. This will give you a reference of where things go.
- Using a cookie sheet with folded up sides will help keep parts from falling on the floor.
- We suggest not removing the throttle shaft, valves, or choke shaft unless they are corroded, or very dirty. These parts can be easily damaged and are difficult to re-assemble.
- Instruction sheets that come with our carburetor kits are somewhat generic. It may not match your parts exactly.
- Do NOT use WD-40 around your carburetor. It reacts with ethanol.
- Using Silicon Spray Lubricant on the gaskets will help with sticking in case you need to take the carburetor apart again.
- Be careful after taking the top of the carburetor off. Turning the carburetor upside down may cause parts to fall out and you won't know where they were.
- Screws and jets that are frozen can often be removed after heating outside the screw or jet.
- Stuck check balls can be removed by heating the outside of where the check ball resides and tapping the carburetor on the work bench.
- Do not discard any parts until complete done. You may have to refer for size, or matching.

Cleaning:

- Clean with carburetor dis-assembled.
- Soak all parts except rubber & electrical in Simple Green for 2 hours. Aluminum parts will get discolored if left longer.
- Wash parts with hot water if available to remove all chemicals.
- Blow out each passage way taking special notice of the smaller ones. Test each passage that air goes through the entire passage.
- Blow out the idle mixture hole.

- Check any hole above the idle mixture hole (inside the bore). This is the idle discharge and often becomes plugged.
- A tooth brush can facilitate cleaning parts.
- Soda blasting, then washing again will make the carburetor look good any will clean any minor deposits.
- Any corrosion, or deposits that are hard to remove may indicate the passages are also corroded and the carburetor should be replaced.
- If your engine has been sitting for 6 months or more, the gas has probably turned, and the gas tank will need to be cleaned as well as the fuel lines. Flushing new gas through the tank will not be enough.

Assembly:

- Do NOT apply any gasket sealant on any of the gaskets. Gas will break sealant part and the particles will clog the small passages.
- Test your float.
 - Brass floats should be immersed into hot water. As the air inside expands any leak will be noticeable with air bubbles.
 - Plastic, or Nitrophyl floats should be weighed. The weight is in grams. Check our technical pages for any weight specification that we may have.
- Most gaskets will fit as expected, but you may have to trim some, especially under the venturis.
- Your kit may include multiple gaskets in order to get better coverage out of the kit. Use the one that fits the best. Look for any opening the gasket may leave allowing air into the carburetor. Some holes may be casting holes that don't lead to anything and do not have to be covered.
- Mounting gaskets for multiple bore carburetors do not have to have matching holes. Example a four-barrel gasket can be open in the middle instead of 4 holes as long as the carburetor has some kind of passage between bores. The passage is between primary, or secondary, not both.
- When adjusting the float be careful not to put any pressure on the needle. The viton tip is easily damaged.
- Most idle mixture screws can be cleaned using a soft wire wheel. Inspect for any scoring, which would indicate over tightening. Screw with scoring should be replaced.

Accelerator Pumps:

- On leather cups run your finger around the inside of the cup to break any manufacturer sealant.
- Apply 2 drops of oil to cups (leather, or rubber) before inserting into carburetor. Do not soak the cup in oil. The swelling of the cup needs to happen inside the carburetor. Allow the 2 drops of oil and the gas to do its job naturally.
- Twist the pump as you are inserting to help keep the cup from curling or folding over.
- Test your accelerator pump circuit before putting the top of the carburetor back on. Our technical pages have instructions on how to do this for most carburetor types.
- Pump wells are usually slight tapered, and the pump will not seal until it gets towards the bottom.

1971-78 INFORMATION

IDLE LIMITER CAPS: General Motors cars have idle limiter caps that cannot be turned after they are installed. The limiter caps should be broken only in case of carburetor overhaul and when idle mixture adjustment is made, using car manufacturer procedure. Chrysler Corporation cars have idle limiter caps that do have a limited adjustable range. If removed, follow car manufacturer procedure.

IDLE VENT VALVE ADJUSTMENT (CHRYSLER CARS): Place fast idle screw on second step of fast idle cam. Adjust plastic vent valve so that it just closes by turning the screw in plastic valve.

Note 1: Higher R.P.M. - Solenoid Energized Lower R.P.M. - Solenoid De-energized

Note 2: Adjust slow idle mixture, slow and fast idle R.P.M. as outlined on decal in engine compartment.

Note 3: Automatic choke rod adjustment—Hold choke valve wide open. Push downward on rod to end of Travel. To adjust, bend rod at offset.

1971 2GV 1 1/4" models: Top of rod should be even with center of hole in lever.

2GV 1 1/2" models: Top of rod should fit notch in lever.

1972-78 models (except Vega): Rod should fit in bottom of slot in lever.

Vega: Top edge of pin should be even with bottom of hole in lever. To adjust rotate swivel on rod.

INSTRUCTION SHEET

ROCHESTER CARBURETOR—MODELS 2G-2GC-2GV

50-494-1

GENERAL EXPLODED VIEW

THE GENERAL DESIGN AND PARTS SHOWN WILL VARY TO
INDIVIDUAL UNITS COVERED ON THIS INSTRUCTION SHEET

DISASSEMBLY

USE EXPLODED VIEW AS A GUIDE. SOME UNITS WILL NOT HAVE AUTOMATIC CHOKE PARTS. THE NUMERICAL SEQUENCE MAY GENERALLY BE FOLLOWED TO DISASSEMBLE UNIT FAR ENOUGH TO PERMIT CLEANING AND INSPECTION. NOTE: TO REMOVE PUMP (37) ON LATE MODELS TWIST UPSET END WITH SMALL PLIERS UNTIL IT BREAKS. SERVICE PUMP WILL HAVE A RETAINING CLIP. REMOVE STAKING FROM BOWL COVER FOR EASY REMOVAL OF POWER PISTON ASSEMBLY (42).

CLEANING

CLEANING MUST BE DONE WITH CARBURETOR DISASSEMBLED. USE A CARBURETOR CLEANING SOLVENT TO SOAK PARTS LONG ENOUGH TO SOFTEN AND REMOVE ALL FOREIGN MATERIAL. MAKE CERTAIN THE THROTTLE BORES ARE FREE OF ALL CARBON AND VARNISH DEPOSITS. RINSE OFF IN SUITABLE SOLVENT. BLOW OUT ALL PASSAGES IN CASTINGS WITH COMPRESSED AIR AND CHECK CAREFULLY TO INSURE THOROUGH CLEANING OF OBSCURE AREAS. CAUTION: DO NOT SOAK FLOAT SOLENOIDS, DIAPHRAGM UNITS, PLASTIC WASHER (40) WHEN USED OR RUBBER PARTS IN CLEANING SOLVENTS. DO NOT SAND, WIRE BRUSH, OR FILE ON TEFLON COATED SHAFTS.

REASSEMBLY

REASSEMBLE IN REVERSE ORDER OF DISASSEMBLY. NOTE SPECIAL INSTRUCTIONS AND FOLLOW NUMERICAL OUTLINE IN MAKING ADJUSTMENTS NECESSARY FOR CARBURETOR BEING SERVICED.

SPECIAL INSTRUCTIONS

IDLE ADJUSTING NEEDLES (69) - TURN EACH NEEDLE IN LIGHTLY UNTIL SEATED. THEN BACK OUT 2 TURNS. (DO NOT INSTALL IDLE LIMITER CAPS AT THIS TIME.)

POWER PISTON INSTALLATION (42) - LIGHTLY STAKE CASTING AROUND WASHER.

PUMP (37) - INSTALL SPRING & RETAINER FROM OLD PUMP IF NEEDED.

NEEDLE & SEAT GASKET SELECTION (35) - WHEN TWO NEEDLE SEAT GASKETS ARE SUPPLIED, USE THIN GASKET FIRST, IF FLOAT MEASUREMENT IS EXTREMELY LOW, THEN REPLACE WITH THICKER GASKET.

DUST SEALS (24)(11) - INSTALL SEAL WITH LIP FACING OUT.

AIR HORN TIGHTENING SEQUENCE

VACUUM BREAK ASSY. - WHERE TWO ARE USED AS (BUICK) ADJ. PRIMARY FIRST THEN SECONDARY FOLLOWING PROCEDURE IN FIG. 5 & 6

ADJUSTMENTS

SEE DATA TABLE FOR MEASUREMENTS

ADJUSTMENTS

SEE DATA TABLE FOR MEASUREMENTS

③ TO ADJUST BEND ROD AT EXISTING BEND.

① CHOKE VALVE HELD CLOSED.

② PULL UP ON CHOKE ROD. END OF ROD SHOULD FIT GAUGE NOTCH ON SIDE OF CHOKE LEVER. (1971 CHRYSLER CORP. ROD END SHOULD BE EVEN WITH TOP OF HOLE IN CHOKE LEVER.)

BUICK-JEEP-PONTIAC (CHRYSLER CORP.)

1970 TOP OF ROD SHOULD BE EVEN WITH BOTTOM OF HOLE.

① CHOKE VALVE HELD IN WIDE OPEN POSITION

② PUSH DOWN ON CHOKE ROD TO LIMIT TRAVEL.

NOTE: VEGA-TOP EDGE OF PIN SHOULD BE EVEN WITH BOTTOM OF HOLE IN LEVER. TO ADJUST ROTATE SWIVEL ON ROD.

ON CAR
CHOKE COIL ROD ADJUSTMENTS

1971 1 1/4 MODELS TOP OF ROD SHOULD BE EVEN WITH CENTER OF HOLE.

1971 1 1/2 MODELS TOP OF ROD SHOULD FIT NOTCH IN LEVER

1972 & LATER ROD SHOULD FIT IN BOTTOM OF SLOT IN LEVER.

③ TO ADJUST BEND ROD AT EXISTING BEND.

ALL MODELS OF CHEV., CHEV. & GMC TRK. FIG. 10

USE FACTORY CAR MANUAL PROCEDURE FOR SETTING SLOW IDLE IF AVAILABLE, AND SPECIFICATIONS LISTED ON ENGINE DECAL.

ADJUSTING SCREW
SOLENOID
THROTTLE STOP SCREW
IDLE MIXTURE NEEDLE

SUPPLEMENT

SLOW IDLE ADJUSTMENT WITH IDLE STOP SOLENOID

1. SET IGNITION TIMING PER CAR FACTORY SPECIFICATIONS AND PROCEDURE.
2. ENGINE AT OPERATING TEMPERATURE, CHOKE FULLY OPEN.
 - A. DISCONNECT DISTRIBUTOR VACUUM HOSE AND PLUG.
 - B. DISCONNECT FUEL TANK HOSE FROM VAPOR CANISTER
 - C. AUTOMATIC TRANSMISSION IN DRIVE, (WHEELS BLOCKED) A/C OFF.
3. CHECK ENGINE COMPARTMENT DECAL FOR SPECIFICATIONS ADJUST THROTTLE STOP SCREW TO THE PROPER R.P.M. USING A TACHOMETER.
4. ADJUST IDLE R.P.M. BY TURNING ADJUSTING SCREW OF IDLE SOLENOID. (SOLENOID LEAD MUST BE CONNECTED SO SOLENOID IS ENERGIZED.)
5. AIR CLEANER INSTALLED.
6. ADJUST IDLE MIXTURE NEEDLES TO OBTAIN THE HIGHEST R.P.M. AT THE LEANEST BEST IDLE SETTING. READJUST IDLE SPEED IF NECESSARY.
7. TRANSMISSION IN NEUTRAL, DISCONNECT ELECTRICAL CONNECTION OF SOLENOID. THEN ADJUST SLOW IDLE R.P.M. WITH THROTTLE STOP SCREW. RECONNECT ALL CONNECTIONS.
8. INSTALL IDLE LIMITER CAPS. ON SOME MODELS CAP FITS ON ONLY ONE WAY. LOCKS IDLE NEEDLE WHEN INSTALLED. ON OTHER MODELS PLACE CAP ON IDLE NEEDLE HEAD WITH TAB IN THE EXTREME COUNTERCLOCKWISE POSITION AGAINST THE LIMITER STOP. SEAT THE LIMITER CAP ON THE MIXTURE NEEDLE HEAD BY PRESSING FIRMLY ON THE CAP.

ADJUSTING SCREW
SOLENOID
THROTTLE STOP SCREW
IDLE MIXTURE NEEDLE

SUPPLEMENT

SLOW IDLE ADJUSTMENT WITH IDLE COMBINED EMISSION CONTROL VALVE.

1. SET IGNITION TIMING PER CAR FACTORY SPECIFICATIONS AND PROCEDURE.
2. ENGINE AT OPERATING TEMPERATURE, CHOKE FULLY OPEN.
 - A. DISCONNECT DISTRIBUTOR VACUUM HOSE AND PLUG.
 - B. DISCONNECT FUEL TANK HOSE FROM VAPOR CANISTER.
 - C. AUTOMATIC TRANSMISSION IN DRIVE. (WHEELS BLOCKED.)
 - D. AIR CONDITION OFF
3. CHECK ENGINE COMPARTMENT DECAL FOR SPECIFICATIONS ADJUST THROTTLE STOP SCREW TO THE PROPER R.P.M. USING A TACHOMETER.
4. ADJUST IDLE MIXTURE NEEDLES TO OBTAIN THE HIGHEST R.P.M. AT THE LEANEST BEST IDLE SETTING. READJUST IDLE SPEED IF NECESSARY
5. MANUALLY PULL OUT PLUNGER STEM TO THE LIMIT OF ITS TRAVEL THEN ADJUST PLUNGER LENGTH TO OBTAIN SPECIFIED ENGINE R.P.M.
 - A/T 650 IN DRIVE
 - S/T 900 IN NEUTRAL
6. INSTALL IDLE LIMITER CAPS.

SLOW IDLE ADJUSTMENT

FIG. 11

① SLOW IDLE ADJUSTMENT COMPLETED.

② OLDSMOBILE PLACE FAST IDLE SCREW ON LOW STEP OF FAST IDLE CAM AND ADJUST TO 1000 R.P.M. S/T IN NEUTRAL A/T IN PARK

③ CHRYSLER CORP. PLACE FAST IDLE SCREW ON SECOND STEP OF FAST IDLE CAM AND ADJUST TO 1800 R.P.M.

FAST IDLE ADJUSTMENT

FIG. 12

② TO ADJUST BEND ACTUATING TANG ON PUMP LEVER.

① CHEV. IDLE SPEED ADJUSTED. (IDLE STOP SOLENOID ENERGIZED) MEASURE DISTANCE BETWEEN WIDEST OPENING POINT OF VALVE & SEAT. SHOULD HAVE .025" CLEARANCE.

① CHRYSLER CORP. AFTER FAST IDLE ADJUSTMENT IS MADE. PLACE FAST IDLE SCREW ON SECOND STEP OF THE FAST IDLE CAM. PLASTIC VALVE SHOULD JUST BE SEATED.

② TO ADJUST TURN SCREW IN PLASTIC VALVE.

IDLE VENT ADJUSTMENT

FIG. 13

PUMP CUP INSTALLATION INSTRUCTIONS

A new pump plunger cup, garter spring (when needed), and an assembly tool is included in this repair kit. Replacing the old pump cup and garter spring with new fuel resistant components and reusing the original pump plunger stem and delayer spring ensures proper height adjustment. Follow the illustrated instructions carefully. **Note: A complete pump plunger assembly may be purchased from your supplier if you prefer, or you have broken button tabs and cannot repair your existing pump plunger assembly.**

Caution:
